

Exercise 1: Logging Error Messages and Warning Levels

The screenshot displays the Eclipse IDE interface. On the left, the Package Explorer shows the project structure for 'CTSEx', including 'src/main/java' and 'src/test/java'. The main editor shows the source code of the 'Slf4jEx' class. The code uses the 'Log' class from 'lombok.extern.slf4j.*' to display error, warning, and info messages. The console at the bottom shows the output of the program, indicating that the error, warning, and info messages were successfully displayed.

```
1 package com.cts.mockito;
2 import lombok.extern.slf4j.*;
3
4 @Slf4j
5 public class Slf4jEx {
6
7     public static void displayError() {
8         Log.error("there is an error");
9     }
10
11     public static void displayWarn() {
12         Log.warn("there is warning");
13     }
14
15     public static void displayInfo() {
16         Log.info("information");
17     }
18
19     public static void main(String[] args) {
20         displayError();
21         displayWarn();
22         displayInfo();
23     }
24 }
25
26
```

Console Output:

```
<terminated> Slf4jEx [Java Application] C:\Users\hemap\p2\pool\plugins\org.eclipse.justj.openjdk.hotspot.jre.full.win32.x86_64_25.0.1.v20251108-1451\jn
14:28:35.141 [main] ERROR com.cts.mockito.Slf4jEx - there is an error
14:28:35.143 [main] WARN com.cts.mockito.Slf4jEx - there is warning
14:28:35.143 [main] INFO com.cts.mockito.Slf4jEx - information
```
